

Mitigating Risks from AI x Biosecurity & Recommendations for Governments on AI x Biosecurity Risk

Friday, December 12th, 2025 from 9:00-9:45am
Palais des Nations, Room IX

Leading Chinese, American, and Indian experts on AI and biosecurity will help us to launch INHR's *AIxBio Recommendations for Governments*. These recommendations, arising from an international expert dialogue, aim to help governments address the risks from AI and synthetic biology, including those which could result in creation of biological weapons. The recommendations incorporate viewpoints from biology, technology, diplomacy, law and the military and include input from experts from Europe, China, India, Russia and the USA. Those seeking to better understand how to govern threats and opportunities of AIxBio would benefit from the discussion. This event is co-sponsored by the United Services Institution of India, CECIDE, the Tianjin University Center for Biosafety Research and Strategy, and the Johns Hopkins Center for Health Security.

Coffee and croissants will be available to attendees from 8:45am.
